For immediate release

AI4VALUE AND PROSYS OPC JOIN FORCES – TURNING INDUSTRIAL DATA INTO INSIGHTS

Helsinki 24.8.2026

Ai4Value Ltd, a provider of AI solutions and services, and Prosyst OPC Ltd, specializing in industrial data flow management, have signed a cooperation agreement. The agreement enables the two companies to offer industrial customers data analytics solutions more efficiently, covering the entire journey from raw production data at the source to the results delivered by analytics.

Prosyst's Forge platform collects, harmonizes, and organizes production OT data into an understandable format. Ai4Value further enriches this context with other data from the production environment. The advanced analytics solution models produced by ValueFactory — such as anomaly detection, dependency modelling, and soft sensors — process the resulting data into the insights the customer needs.

Ai4Value's CEO Hanna Kahanpää shares her enthusiasm about the collaboration: *"Through our collaboration with Prosyst OPC, we can offer Finnish industrial companies an efficient and straightforward way to harmonize and analyse industrial data. I'm especially pleased about the benefit this collaboration brings to our customers. As we know, data is the fuel of AI and thanks to Prosyst's Forge, the solutions offered by our ValueFactory platform get exactly that fuel. This allows us to focus on our core expertise, providing our customers with advanced analytics and to fulfill our mission: Powering your data with AI."*

Prosyst OPC's CEO Pyry Grönholm states: *"I'm very pleased that Ai4Value is joining us as a partner. Industrial AI needs harmonized data and that data only becomes valuable once something useful is built on top of it. Prosyst Forge, our DataOps software for industry, takes care of the harmonization. Ai4Value's long-standing AI expertise makes it possible to develop applications that deliver measurable value for the customer."*

Ai4Value in short

Ai4Value is a Finnish industrial AI company, based in Helsinki since 2018, specializing in industrial AI solutions and services for manufacturing, energy and process industries. Our services include AI solution development and implementation as well as consulting and trainings. At the core of our solutions is ValueFactory Platform, our proprietary AI platform for industrial production environments. It enables the rapid development and deployment of AI solutions. ValueFactory runs our proprietary Solution models, including: anomaly detection, predictive maintenance, energy grid balance analysis, material characterization and Industrial data dependency modelling.

Prosyst OPC in short

Prosyst OPC is a Finnish software company specializing in industrial data interoperability. We develop the OPC UA technology stack, used by software developers around the world to build connected industrial products, as well as Prosyst OPC UA Forge, an Industrial DataOps platform that harmonizes data close to the source so that any OT or IT application can use it. We have customers in more than 50 countries, and we offer professional support services alongside every product.
